

# RUBY

WEEK 7

# MID-TERM REVIEW

- Git issues: take some time to fix now.
- Questions??

#### TESTING AGENDA

- Behavior Driven Development with Cucumber
- Fun with MiniTest
- If times allows: TestUnit

# BEHAVIOR DRIVEN DEVELOPMENT

- User Stories
- Business Value
- Communication
- Shared Tools

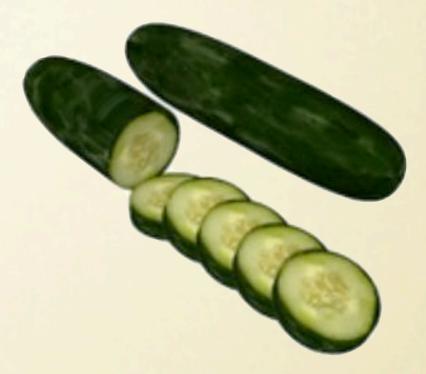

#### BEHAVIOR SPECS

- Title
- Narrative
- Acceptance Criteria / Scenarios / Outcomes

- gem install cucumber
- cucumber --help

#### FEATURES

- Human Read/Writable description of behavior
- Business Users write the features, Programmers develop the features to spec
- <a href="https://github.com/cucumber/cucumber/wiki/">https://github.com/cucumber/cucumber/wiki/</a>
  Feature-Introduction

#### GIVEN-WHEN-THEN

- Describing your feature
- Preconditions
- Something happens
- Expected outcome

#### STEP DEFINITIONS

- REGEXP!!
- Translation between the human narrative and the code
- This type of sentence, matches to this type of code

#### DEMO!

- I want a Celsius to Fahrenheit converter
- I tell my story
- I copy the generated regex
- I write my tests
- TDD!

## EXAMPLE!

- New Feature!
- I'm in London and I can't share bar stories without being able to convert Fahrenheit to Celsius
- Write the Steps
- Make Them Pass!

# MINITEST

- Built into Ruby 1.9!
- SeattleRB!
- Light, Fast, FUN!

# EXAMPLE

- Make a ruby file
- Add some tests
- Make them pass
- All Ruby!

# TEST UNIT

- Jeweler!
- Simple testing framework
- Used lots of places!

# CUCUMBER WITH JEWELER AND TRAVIS

- EXAMPLE!
- Add cucumber to Gemfile
- Run bundler
- Add feature, steps, and support (env.rb)
- Add to travis.yml file

#### HOMEWORK

- Read Chapter 23 and 24 DuckTyping and MetaProgramming
- Make the cucumber features pass
